French government debt news

Launch of the MTS France electronic trading platform

Launched on 25 April, the MTS France company is specialised in electronic trading of French debt. Thanks to this new tool, all French public debt securities (OATs and BTANs) can now be traded electronically, which will help optimise the liquidity and transparency of the French debt market.

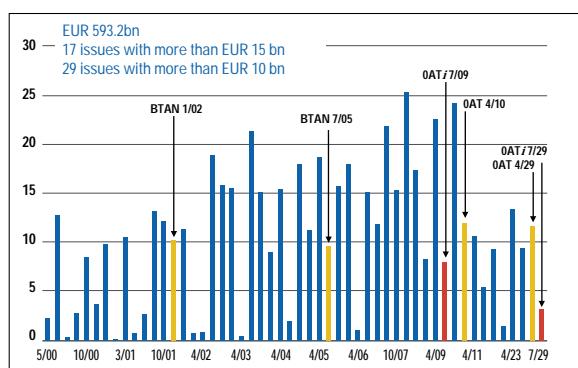

In order to salute this event, the opinion column in this issue of France Trésor's monthly bulletin is devoted to this subject.

First joint auction of 10-year and 30-year OATs

The 10-year and 30-year OAT is were auctioned jointly for the first time on May 4th. This auction was a clear success since the issued amount was more than three times oversubscribed for both lines. Their amount outstandings were thus raised to EUR 8.0 bn and EUR 3.2 bn respectively. The 30-year real yield came out for the first time slightly below the 10-year real yield (3.71% vs 3.72%). The interest for the 30-year OAT i is also visible when comparing its evolution with the OAT of same maturity. Indeed, as OAT 2029 and OAT i 2029 were both auctioned on April 6th and May 4th, the real yied was stable over the period whereas the nominal yield increased during the same time by 17 basis points. France Trésor will continue issuing both OAT i lines to support the growth of this market, particularly its internationalisation, and to ensure its liquidity.

FOCUS

Forum

Launch of MTS France

MTS France, the new electronic quotation platform on the secondary French public debt market, was successfully launched on 25 April. This platform is managed by the MTS France company, whose ownership structure consists of ParisBourse^{SBF} SA, MTS SpA and all Spécialistes en valeurs du Trésor (SVT - primary dealers in government securities).

The purpose of this new electronic trading platform is to optimise the efficiency, liquidity and transparency of the secondary French government debt market at a time when French government debt is becoming increasingly international and a recognised benchmark in the euro area.

With total outstandings of EUR 590 billion, French public debt accounts for almost a quarter of euro-denominated sovereign debt. Indeed, French debt accounts for over 35% of the most liquid euro-denominated government debt lines, i.e. those whose outstandings exceed EUR 10 billion. Quoting more than 30 French government securities (see the focus graph) with maturities from 1 to 30 years, i.e. almost the entire French public debt, the MTS France platform can be used to trade in total outstandings of almost EUR 470 billion.

The success of MTS France is underpinned by three pillars :

First, the liquidity of the system is maintained by all the Spécialistes en valeurs du Trésor, who have supported this project from inception and are all shareholders. In collaboration with France Trésor, they form a Market Committee charged with laying down trading rules. As part of their obligations, they agree to make markets in the securities concerned in order to ensure at all times maximum liquidity of the entire French debt.

Secondly, MTS France benefits from Clearnet SA's clearing expertise and the general expertise of the ParisBourse^{SBF} SA staff in monitoring the market and performing back office duties. This expertise will be extremely valuable once the SVTs start implementing their plan to turn MTS France into a regulated market.

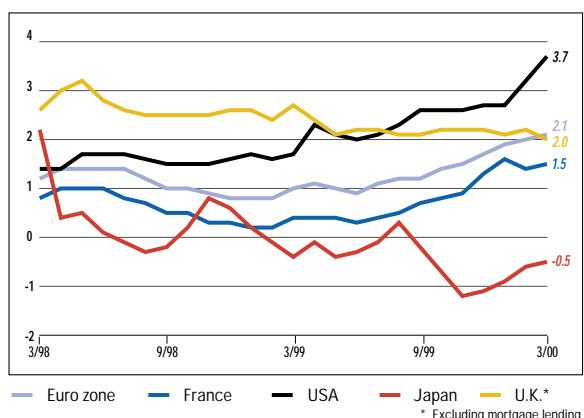

Lastly, MTS France benefits from the expertise of MTS SpA, its third partner, with electronic public debt trading systems in Italy and other countries in the euro area.

In short, the MTS France project is user-driven and has provided the main French debt players with the incentive to make the French fixed-income market benefit of new techniques, in the innovation tradition for which the French financial market is known.
