French government debt news

Continued consolidation of public finance

The first evaluation of the general government national accounts published by INSEE confirms the strong consolidation of public finance. In 1999, French public deficit was reduced from 2.7% to 1.8% of GDP. In contrast with recent years, the central government budget recorded a primary surplus (FRF 21 bn or 0.2% of GDP) while the social security funds posted an aggregate surplus. As a result, the debt/GDP ratio improved for the first time in 20 years, to 58.6% (down 0.7 point). Public deficit and the weight of debt will continue to improve in 2000 and after. The objective for public finance is to nudge break-even by 2003.

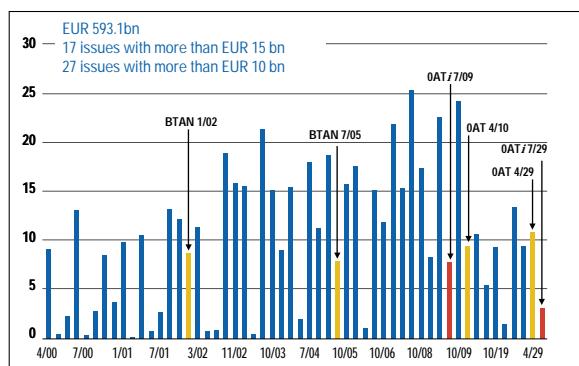

EURONEXT, the first merger of independent national stock exchanges

On 20 March, the stock exchanges of Paris, Amsterdam and Brussels announced their decision to merge into a new entity: EURONEXT. EURONEXT will be the largest stock exchange in the euro area with 1,300 listed companies, representing market cap of EUR 2,380 bn. It will offer investors, issuers and intermediaries a complete range of services, including equity, debt securities and derivatives. EURONEXT's derivatives center of excellence will be based in the Netherlands, while MATIF will remain the only electronic market for interest-rate derivatives within this larger entity, thus furthering its growth.

Moreover, EURONEXT will be supported by the unified delivery-versus-payment structure of the new entity born from the merger between SICOVAM and EUROCLEAR. Announced on 24 March, this merger is the outcome of cooperation agreements between the two clearing houses and lays the groundwork for a single European DVP organization.

France on the eve of a sustained high growth period?

Economic recovery is now alive and kicking in France (Barclays Capital forecasts +4.1% in 2000 and +3.6% in 2001). There is more at stake than a mere cyclical rebound after the 1999 slowdown: a sharp catch up process in domestic demand is in the making, while few signs emerge of a large positive supply-side shock, likely to boost the potential growth.

First, domestic demand has a lot to catch up. Despite the good growth data of 1998-99, average growth since 1990 is dismal: +1.6% a year for the GDP, +1.2% for private consumption and +0.7% for investment. A growth path of 3.0% a year from 2002 till 2005 would leave the average growth since 1990 at just 2.25%. With confidence back, with unemployment declining sharply and with a huge need to renew and extend the capital stock, conditions for an above 3.0% average growth are met. Unlike during previous growth cycles, no intra-European FX crisis will grind the recovery to a halt, while monetary policy should continue to be rather accommodative. A broadening of the labour pool -as in US- and more flexibility in the labour supply would reinforce this non-inflationary growth.

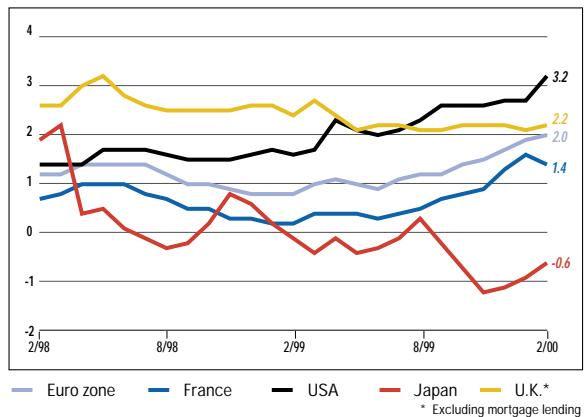

Second, beyond this catch-up move, potential growth could improve. The extraordinary recent US growth can be analysed as such: an important supply-shock (Information Technologies) shifts the GDP upward from a normal trend path (say 2.0%) to a higher one. During the transition period (i.e. a few years), strong productivity gains develop, linked to declining marginal costs in the IT sector. A non-inflationist growth of 4.0% is then possible. A few years later, when the marginal yield of internet use will have declined, the US economy should be back to its long run growth trend, but at a higher level. So far, there are no evidence of that in France. But the recent boom in IT is a good sign. However the quick spread of IT should enable France to catch up rather shortly with the US. For this supply-shock -a creative destruction- to increase the French potential growth, two things are required: a high level of human capital, flexibility of production factors (as they will have to be re-allocated quite often).

If a growth potential of 4.0% is unlikely to be reached in France (mostly because labour population is at best flat in France in the medium run, while it grows by 1.0% a year in the US), a figure of 2.75 or 3.0% is possible. What a change would it be compared with the past 20 years (+1.6% a year)!

Durée de vie moyenne des obligations :
8 ans et 184 jours

Average maturity of OATs:
8 years and 184 days

OAT : OAT indexée sur l'inflation.

TRA : taux révisable, en fonction des taux de rendement des emprunts d'État à taux fixe d'échéance supérieure à 7 ans, publiés par la Caisse des dépôts et consignations.

TME : moyenne arithmétique des taux de rendement moyens mensuels des emprunts d'État à taux fixe d'échéance supérieure à 7 ans sur l'année précédant la date de mise en paiement du coupon.

TEC 10 : taux de l'échéance constante à 10 ans.

OAT : inflation-indexed OAT.

TRA : variable rate based on the yields of all fixed-rate French Government bonds (EE and OATs included) with maturities greater than 7 years, as published by the CDC.

TME : the coupon rate is the arithmetic mean of the monthly average of all fixed-rate French Government bonds (EE and OATs included) with maturities greater than 7 years. The coupon rate is fixed every January based on the previous calendar year.

TEC 10 : 10-year constant maturity Treasury.

1 euro = 6,55957 FRF
