monthly bulletin

French government debt news

2001-2002 Annual Report

The French version of the 2001-2002 Annual Report of Agency France Trésor was put on line on May 31. By the time you receive this bulletin, an English version should also be ready on the Agency's web site. Printed versions should be available by early summer.

As in previous years, the report takes stock of the economic and financial situation in 2001, particularly in the euro zone. It recalls the first year of the Agency's existence, the main changes that took place in 2001 in French government debt management (creation of the first Treasury bond indexed to harmonized index of consumer prices in the euro zone, launch of trading on the interest-rate swap market) and the implications of the Constitutional bylaw on budget acts of 1 August 2001.

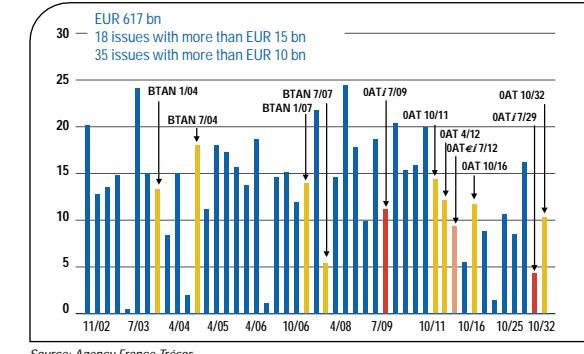

Two new technical datasheets have been added to the Report, the first pertaining to the monitoring and management of government cash and the second to risk control and back-office activities.

The dollar is weakening but is not expected to collapse

The effective exchange rate for the dollar, which reached a peak of 124.90 on February 27, fell back to 116.90 on May 29 (the lowest level since October 2001). This is equivalent to 6.4% depreciation of the dollar in three months, an event rarely seen in the last few years.

Several factors specific to the United States can explain the weakening of the dollar:

- Pressure brought to bear on the Bush administration by American lobbies to end its strong dollar policy have met with some success. As the Congressional elections draw nearer (November 2002), the White House has opted for protectionist measures and massive farm subsidies. These initiatives testify indirectly to the fact that a strong dollar policy is no longer suitable.
- More generally, the increasingly negative impact of the growing US trade deficit on the country's rate of GNP growth is a signal to the markets that the US is now concerned about foreign trade.

All the signs indicate to the markets that the US is in favour of, is actively seeking and will succeed in obtaining a depreciation of its currency. This new perception has arisen just as American capital markets have become less attractive, due to uncertainty as to the buoyancy of the economic recovery in the United States, contracted balance-sheets of American firms and sudden deterioration of public finances.

In addition to these factors which are specific to the situation in the United States, factors relating to other currencies also enter into the equation. Let us take the two most powerful currencies for example:

- The yen is benefiting from the flow of capital towards Japan, in the wake of renewed optimism regarding the Japanese economic recovery. We consider this optimism excessive, since

the upturn is still embryonic and fragile. Enthusiasm for the yen may well persist for some time, however. The Nikkei index and the yen will probably continue to benefit from the fact that the Japanese government has narrowly restricted the short sale of Japanese shares since February 27.

- The euro is also benefiting from special enthusiasm on the part of operators. Some are playing the euro against the British pound, wagering on a junction of the two currencies. Others favour European stock exchanges over Wall Street. Everyone appreciates the current pragmatic attitude of the ECB.

In short, all the influences are converging to start the dollar on a downward course of significant depreciation.

We wish to point out, however, that we do not foresee a collapse of the US currency. Indeed, the other countries of the G7 are not particularly eager to see their currencies strengthened. Some of them would even be heavily penalised by such reinforcement.

That is true, first of all, for Japan, which owes its current upturn exclusively to its exports. A sudden strengthening of the yen would cut short its economic recovery. Consequently, aggressive, determined interventions have already taken place and will continue to prevail.

The euro zone would not enjoy seeing the exchange rate of its currency suddenly rise either. While the current appreciation is convenient for the ECB and should prevent it from raising its key rate in the near future, a continued upward movement of the euro would not be welcomed by exporters and would harm the economy of the euro zone which, it must be remembered, is still driven more by external demand than by domestic demand.

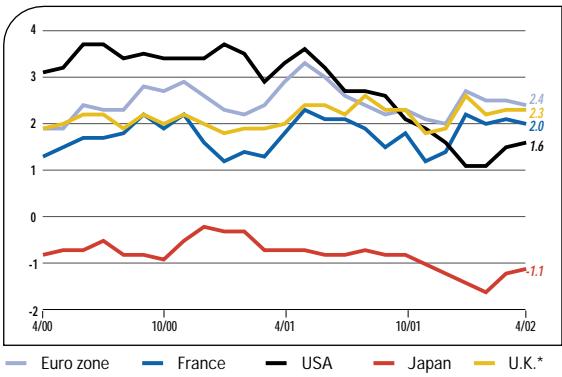

In the end, we think that the dollar will continue to depreciate but that a rappel mechanism is in place to prevent its decline from amplifying.

The Agency France Trésor reserves the right to cancel an auction listed on the calendar if exceptional market conditions warrant it, or to hold an extra auction according to its borrowing needs and market trends.

Furthermore, the State reserves the right to create new, long- or medium-term, lines during the year, or to issue further tranches of previous issues in accordance with market conditions. The State also reserves the right to use banking syndicate issue procedures.

The exact nature of the State issues will be communicated to the market in the days preceding each auction with information on the volume of the issues.
