French government debt news

Successful launch for the new 10-year OAT

The first auction of the OAT 5% 25 April 2012, held on 7 March 2002, was a great success. Nearly EUR7.7bn was issued for bids of EUR15.75bn. Both figures constitute new records. Seven primary dealers took more than EUR500m, showing that French government securities are highly attractive investments.

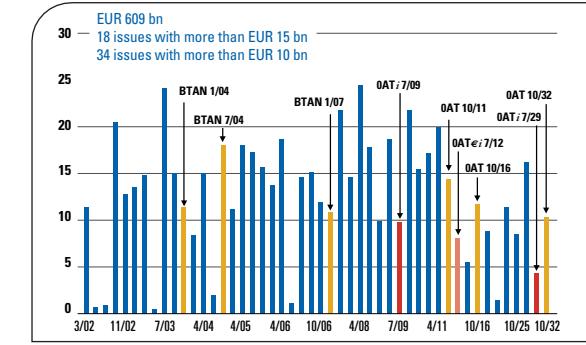

This OAT shall be the new 10-year benchmark bond. The comparison of its yield to that of the OAT€; 3% 25 July 2012 will also be the reference for market expectations with regard to inflation in the euro area ("break-even inflation point"). With a yield at issue of 5.24%, versus an OAT€; yield of 3.28% on the same date, the "break-even inflation point" for the euro area works out to 2%.

The euro zone's policy mix

The capacity of monetary and fiscal policies to react to the slowdown in growth might appear to be weaker in Europe than in the United States. In reality, the amount of support that the policy mix provides for activity is comparable on both sides of the Atlantic.

As the Asian crisis had clearly shown, monetary and fiscal policies have lost none of their ability to stabilise economies. Nevertheless, Europe has been unable to use the monetary weapon to the full in the past two years because of a temporary surge in inflation. Now, however, the decline in inflation that began last summer has unleashed scope for cuts in interest rates. The effectiveness of such cuts in coming quarters will be all the greater in that the European economies, unlike that of the United States, are not suffering from over-investment.

Admittedly, cuts in key interest rates have been on a much larger scale in the United States than in Europe and the action taken by the FED has, in particular, permitted a very significant reduction in the cost of borrowing for households. Vis-à-vis businesses, on the other hand, the FED's moves have been more defensive in character: the dollar has remained high and the main effect of the cuts in key interest rates has been to compensate for the rise in the cost of financing brought about by the slump in stock market prices and the increase in risk premiums. In fact:

- the monetary and financial conditions index (including short rates, long rates and the value of the currency) has remained stable in the United States for the past two years whereas it has eased significantly in Europe mainly because of the depreciation of the exchange rate (see the "focus" graph opposite);

- rates for corporate bonds have declined slightly on both sides of the Atlantic, while remaining higher in the United States than in Europe;

- the decline in stock-market prices has been on the same scale in the two cases, but American businesses are more dependent on the stock market for their financing than are European businesses.

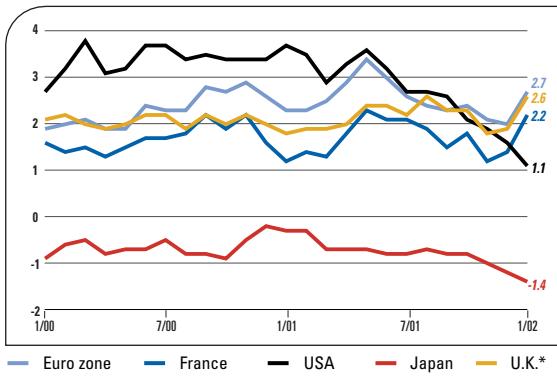

All things considered, the general conditions for the financing of the economy seem to be somewhat more favourable in Europe than in the United States.

As regards fiscal policy, the automatic stabilisers are more powerful in Europe than in the United States. The spontaneous decline in public revenue at a time of economic slowdown provides automatic, rapid and co-ordinated support for activity in the European case that is on a greater scale than in the United States because of the higher proportion of such revenue in GDP: 45.5% in the European Union as against 31% in the United States. Had the United States enjoyed the benefit of the European automatic stabilisers, it would have received the equivalent of a support programme amounting to one point of GDP, without any decision having to be taken. In the final analysis, when one combines the impact of discretionary measures and revenue losses, the contribution of fiscal policy to macro-economic stabilisation turns out to be identical on both sides of the Atlantic.

The Agency France Trésor reserves the right to cancel an auction listed on the calendar if exceptional market conditions warrant it, or to hold an extra auction according to its borrowing needs and market trends.

Furthermore, the State reserves the right to create new, long- or medium-term, lines during the year, or to issue further tranches of previous issues in accordance with market conditions. The State also reserves the right to use banking syndicate issue procedures.

The exact nature of the State issues will be communicated to the market in the days preceding each auction with information on the volume of the issues.
