Towards a rise in long-term yield?

Recent fears that deflation could hit the world economy have reduced break-even inflations both in the US and Europe and flattened yield curves by bringing 10-yr rates to 50 years' lows at respectively 3.4% and 3.7%. These movements were stronger in the US as these fears raise market speculation that the Fed could use non-conventional means to withstand this evolution via the purchase of Treasury bills. As a consequence, the negative spread between US and German long term government bond yields remains at its widest level since 1996. In our view, however, these deflation fears are overdone, especially in the US. Thus, an upward correction on long term yields and a return to a positive spread between the US and Europe looks likely by the end of this year. This view is based on three factors.

The growth differential between the US and the Euro area is forecast to widen in the second half of this year. This is because the drastic adjustment made by US companies to restore their financial health enabled a return to profits in the economy. Financial conditions (equity markets, credit spreads, banking facilities) are showing signs of improvement and lower oil prices, the dollar fall and the prospect of another fiscal stimulus give strength to the recovery scenario. Conversely, the delay taken by European companies in adjusting their balance sheets, the rise in EUR/USD, and the lack of headroom in budget policies at a time when the European economy is less sensitive than the US to rate cuts create downside risks on business activity growth in the short term. The prospect for the US economy to grow towards its potential this summer should help expel the "deflationary premium" that has been built into US long term yields.

As the world economy slowed down, budget situations overall deteriorated. In case such situation continues in the medium term, it would create an upside risk on long term government

yields. It is in the US that the pace of budget deterioration has been particularly marked and the latest tax cut package from the Bush administration increases the risk that this situation could linger. While European governments are pleading for greater flexibility in the interpretation of the Growth and Stability Pact in the short term, its existence in the medium-term is not questioned, as witnessed by the structural reforms announced in most EMU countries. For the US, the existence of such a limiting force and the form it could take are still uncertain.

Finally, over the past year, the volatility in short rates gave way to FX volatility. The sensation of a reflation policy fostered by the US government by weakening the dollar against the backdrop of current account deficit increases the risk of a correction on US assets. The outlook of a continuing dollar fall justifies a new rise in the fair price on the US long-term yield curve.

In our view, this correction in rates will concentrate mainly on the 5-10 yr segment of the US curve for two reasons. On the one hand, deflation speculations were the greatest on these maturities with a 20bps and 15bps fall since the beginning of May on 5 yr and 10 yr break-even inflations. On the other hand, the financing effort of the budget policy should primarily concern this segment, there is already excess supply on short maturities and the Treasury is reluctant to take the risk of reopening the 30 yr, which could increase upside tension on yields, adding pressure to fixed assets spending and the property market.

The Agency France Trésor reserves the right to cancel an auction listed on the calendar if exceptional market conditions warrant it, or to hold an extra auction according to its borrowing needs and market trends.

Furthermore, the State reserves the right to create new, long- or medium-term lines during the year, or to issue further tranches of previous issues in accordance with market conditions. The State also reserves the right to use banking syndicate issue procedures.

The exact nature of the State issues will be communicated to the market in the days preceding each auction with information on the volume of the issues.
