# French government debt news

## Draft Budget Bill for 2005

The Government has adopted, Wednesday, September 22<sup>nd</sup>, the draft Budget Bill for 2005. Following this announcement, Agence France Trésor indicates that the financing needs for the State will amount to €118 billion, out of which €44.9 billion result from the projected deficit for 2005 and €73.1 billion result from the redemption of the debt falling due in 2005.

Concerning the execution of the financing programme for 2004, Agence France Trésor indicates that the reduction of the deficit will entail a decrease in short-term debt outstanding, on December 31, 2004. This decrease is currently estimated at €9.6 billion.

## **Funding programme of the State for 2004 and 2005**

	2004 (estimate, Sept.2004)	2005 Budget Bill (PLF)
<b>Financing requirement</b>		
Redemption of medium- and long-term debt	66.5	73.1
Budget deficit	49.1	44.9
<b>Total financing requirement</b>	<b>115.6</b>	<b>118</b>
<b>Funding sources</b>		
Medium- and long-term issues	122	118
Net changes in BTFs	-9.6	0
Changes in deposits	3.2	0
Changes in Treasury account	0	0
<b>Total funding sources</b>	<b>115.6</b>	<b>118</b>

## focus

### Contribution to GDP Growth

Average on 03Q3-04Q2 period

## French exception

In contrast to many other major economies, the French economy has performed remarkably well in recent years. While the US, Germany, Japan and Italy all experienced recessions, France continued to grow. This strength is likely to continue. In 2004, the French economy will grow by around 2,5%. This compares with growth of 1,75 % in the euro area, and just 1,5% in Germany.

The strength of the French economy reflects the resilience of domestic demand, which cushioned the economy from the sharpest slowdown in global trade for at least three decades. Since the end of 2000, real household consumption has grown by 8?, compared with growth of 3% in Italy and stagnation in Germany. Consumers kept spending because their disposable incomes continued to rise. This reflected robust growth in real wages and significant cuts in income taxes. The French government has introduced a series of tax cuts since its 2000 budget. As in the US, these were well timed, with the largest impact felt in 2001-02, the trough in the global business cycle. Although smaller than in the US, they were better targeted, concentrated upon low-income taxpayers – those most likely to spend them.

Although GDP growth slowed in 2003, the economic recovery has gathered momentum during the first half of 2004. Again this largely reflects an improvement in consumer spending. Although the labour market has remained weak, households have run down their savings to support their spending. In part this is a response to historically low interest rates and a strong housing market. But it also reflects improving confidence. Unlike in other major economies, French household balance sheets are in a healthy position. Until recently the household saving ratio, the ratio of saving to disposable income, was above its long-run average. In the US, Germany, UK and Italy, saving ratios are below their long-run averages. So as confidence has returned, consumers have been prepared to save less.

The outlook for the French economy remains brighter than in other parts of the euro area. Robust domestic activity will insulate the economy from another sharp fall in global growth in 2005. Demand in the US and Asia is slowing because of tighter macroeconomic policy and high oil prices. Large persistent global imbalances also pose a threat of a further rise in the euro exchange rate. Slower global demand and a stronger exchange rate will hurt euro-area exports. This will expose the weakness of domestic demand in Germany and Italy. Though consumer spending is likely to moderate, it will remain relatively strong in France. Low interest rates will continue to support growth. The ECB is likely to keep interest rates on hold until at least the end of 2005.

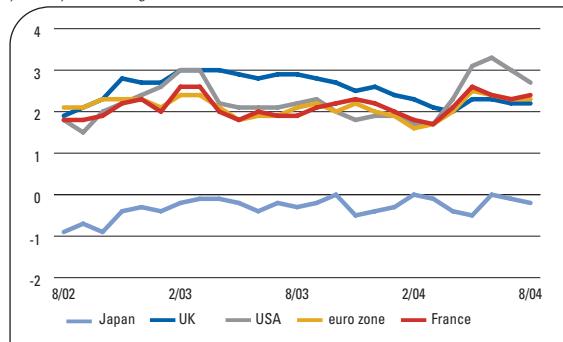

The main risk to GDP growth comes from the weak labour market. Despite strong demand, employment has been broadly flat during 2004 and the unemployment rate, at 9.9%, is still high. Instead of taking on new workers, businesses are making their existing employees work harder. This is likely to prompt a moderation in consumer spending over the short term. But the resulting increase in productivity is also feeding a recovery in corporate profits and this will eventually encourage businesses to start hiring and investing again. By moderating unit labour costs, it will also reduce inflationary pressures.
