Launch of a 15-year OAT linked to the euro zone consumer price index

Agence France Tresor announces the launch of the new 15-year index-linked OAT€i, to take place during the week beginning January 12, 2004, market conditions permitting. The maturity of the new OAT, linked to the euro-zone HICP index of consumer prices (excluding tobacco) is July 25, 2020.

The lead managers of the syndication are BNP Paribas, Deutsche Bank, Goldman Sachs, and Société Générale; the distinguished lead-managers are ABN Amro, Crédit Agricole Indosuez, and CDC Ixis Capital Markets. All the SVTs are co-leaders. Settlement will take place at the end of January.

This issue is part of the 2004 State Financing Programme as determined by Mr Mer, minister of the Economy, Finance and Industry, as made public December 16, 2003.

As announced on December 16, AFT will auction index-linked OATs on the third Thursday of every month (except in August and December). The first such auction will take place February 19, 2004.

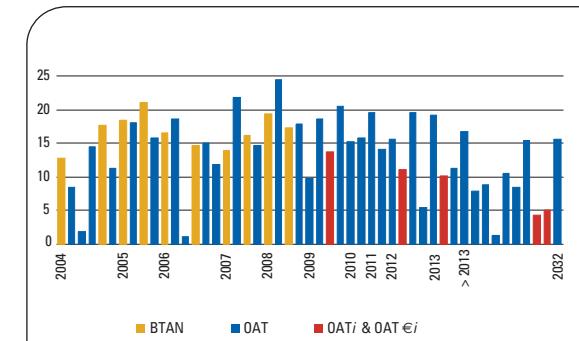

With the 2019 (2020) OAT ϵ , AFT complements its range of secure and liquid products intended for investors seeking protection against inflation. A total six lines of index-linked OATs are available, with maturities ranging from 2009 to 2032, linked to the French or the euro zone price indexes.

Building the real curve (December 23, 2003)

Source : Bloomberg

Protecting against reflation

Agence France Tresor on December 15 announced its intention to issue a new bond linked to eurozone inflation excluding tobacco with a maturity of 15 years. This is another fulfilment of market expectations, as they sensed the need to bridge the gap between demand and supply for IL (index linked) bonds. The expected volume to be issued on the new 15-year could reach € 3 to 5 bn, i.e., equivalent to that of the 2032 OAT€i. The construction of a real interest rate curve, as initiated by France in 1998, now is the result of a joint European effort since the Republic of Greece issued a 20-year in March and the Republic of Italy a 5-year in September, both issues linked to eurozone inflation (excluding tobacco).

The market of index-linked securities is indeed gradually drawing the attention of an increasing number of issuers and investors, in spite of its small relative size – only 1% of total public debt in the euro area, four times lower than in the US. The European Central Bank has also acknowledged its informational value on several occasions. It provides a unique financial solution to those seeking risk-free, inflation-protected transfer of income onto the future, namely future pensioners, without having to make a bet on the sharing of national income between wages and profits, as in the case with stocks.

Although neither issuers nor investors are really focused on this “public good” dimension, there is considerable information to gather from the existence of an index-linked market, especially once it has gathered enough momentum in terms of liquidity to present meaningful levels for yields and breakeven inflation – the difference between nominal and real yields.

Forward breakeven rates, in particular, are conspicuously relevant signals to monitor for an inflation-targeting central bank; for long-dated forwards, their difference to the targeted inflation rate, or to the maximum inflation

rate accepted by the central bank, gives an interesting indication on the credibility granted to monetary authorities: currently long-dated inflation forwards are 60/70 basis points above the ECB’s 2% threshold. For short-dated forwards, they can represent a useful single synthetic indicator of short-term nominal rates as set by the central bank: currently short-dated forwards stand 25/30bp above the ECB’s threshold.

Some well-defined themes have slowly emerged on the inflation market in 2003, and should be confirmed in 2004. The first is that some critical mass seems to have been reached where investors are ready to pay for the protection against inflation, whereas in the past they wanted to get compensation for the lack of liquidity of the bonds; a positive inflation premium has emerged, with breakeven inflation rates getting in the past few months probably slightly higher than economists’ inflation forecasts. The second is that the environment has become quite favourable to inflation-linked instruments: with economic policies focusing worldwide on “reflation”, the risk of excessively accommodative policies is seriously considered and index-linked bonds provide with a great hedge against this risk.

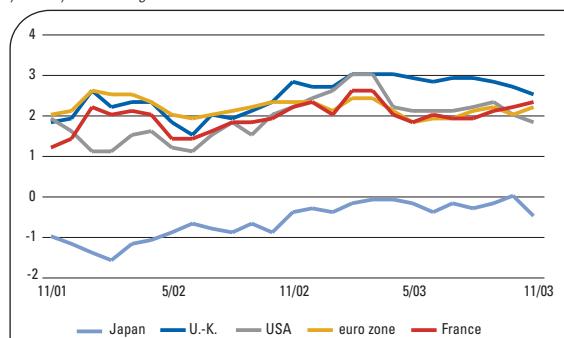

Not everybody yet has been convinced by this very favourable combination of supportive factors, though. Some issuers remain puzzled, on a fundamental basis, by the valuation of real yields and are deterred by the uncertainty ex-ante of the future inflation uplift on repayments intrinsically connected to the issue of inflation-protected bonds.
