Focus

Euro area business cycle upturn delayed once again

For some time now, the Euro area business cycle has been extremely muted: since the beginning of 2002, the year on year growth rate has averaged between 0.4% and 2.2%, and the region has not had two or more consecutive quarters of annualized growth exceeding 2%. Throughout this period, we have maintained an optimistic view that the region would experience a stronger business cycle upswing, as the post-bubble corporate adjustment faded and as low interest rates increasingly gained traction. But this view has been repeatedly disappointed. Although corporate profits have been restored, and credit growth has accelerated, these positive business cycle forces have been overwhelmed by further negative shocks, notably the rise in the currency, increased competitive pressure, and high energy prices.

This pattern looks set to be repeated again in the coming months; the improvement in growth momentum evident in the early summer is likely to disappear in the face of the latest move up in energy prices.

The normal business cycle pattern should be a gradual pickup in capital spending, to be followed by an improvement in hiring. The first leg of this process is under way but the corporate sector's desire to invest is not yet robust enough to keep going through shocks to demand; capital spending faltered in the spring of last year and in the spring of this year in the face of moves up in energy prices. This is likely to happen again in the coming months. Meanwhile, hiring remains subdued and a further shock to demand from oil prices is likely to delay hiring to a significant extent.

The outlook for the consumer in the Euro area over the next twelve months remains tied to labor-market developments and to hiring decisions from the corporate sector. Although the labor market situation has improved over the past year, employment growth remains lackluster. Against the backdrop of a muted business cycle dynamic, and significant structural headwinds, the corporate sector is set to focus again on efficiency, cost containment, and productivity rather than hiring.

Most likely, the latest energy price shock will not only depress growth in the final months of this year, but will also prolong the corporate sector's current cautious stance. This means that another patch of weak growth is likely to extend through next spring or early summer. A business cycle upswing has now been postponed until the second half of next year.

The growth weakness that we envisage – six months of growth averaging close to 1% in the fourth quarter of this year and the first quarter of next year – is likely to put significant pressure on the ECB. Most likely, the central bank will resist this pressure, and will keep rates steady through to the end of next year. The ECB is set to maintain the view that a business cycle upswing is coming, and it is expected to remain concerned about the medium-term implications of solid money and credit growth.
