NEWS

Signature of a cooperation agreement between AFT and the Moroccan Treasury

The *Direction du Trésor et des finances extérieures du Ministère de l'économie et des finances du Royaume du Maroc* (DTFE—Directorate of the Treasury and External Finances of the Ministry of the Economy and Finance of the Kingdom of Morocco) and Agence France Trésor (AFT) signed a wide-ranging cooperation project in Rabat on 18 April 2008. This agreement was signed by the Director of the Moroccan Treasury and the Chief Executive of AFT, in the presence of the Moroccan Minister of the Economy and Finance and his French counterpart.

The Moroccan Treasury has embarked on a new round of reforms aimed at invigorating the primary and secondary markets for its domestic debt, in order to adapt to a profoundly transformed environment. Among these changes have been the independence of its central bank, the obligation on the State to maintain a daily credit balance, and the introduction of a new constitutional by-law on budget acts. It has consequently sought the assistance of Agence France Trésor in setting up a trading room to actively manage its debt and treasury.

Over the course of the coming 24 months, AFT can make its experience available in setting up a trading room, in the choice of an appropriate information system, and on any necessary changes in the regulatory, logistics and organisational frameworks, these being strategic issues for the DTFE. This could take the form of regular contacts, seminars, support missions, and hosting management personnel from the DTFE on an ad hoc basis.

This major cooperation project testifies to the commitment of the French government and Agence France Trésor to sharing expertise and experience with foreign counterparts.

The economy, credit and liquidity: inconsistent messages

By Hervé Gouletquer, Head of Fixed Income Markets Research, Calyon

Capital markets have perked up since mid-March and the rescue of the US bank Bear Stearns. The S&P 500 has gained more than 10% and the ITRAXX (made up of the 125 most liquid CDS on European Investment grade companies) has dropped from 160 to under 70 basis points. More recently, based on better than expected US economic data (although they paint a very bleak picture of the economy with growth flat at best), the dollar strengthened against the euro and the yen. So it appears clear that the worst of the US subprime and structured credit crisis is now behind us. Perhaps, but then what is to be made of the discordant message sent out by the interbank market on both sides of the Atlantic? Indeed, there still appears to be ongoing pressure on spreads between the interbank rates and 3-month swaps, (around 80 basis points at present and still more if we give credit to the recent controversy over the truthfulness of information transferred by the banks involved with the *British Bankers' Association* which calculates the LIBOR rate). Yet, central banks are stepping up initiatives to grant commercial banks greater access to liquidity.

Source : Bloomberg

Still more if we give credit to the recent controversy over the truthfulness of information transferred by the banks involved with the *British Bankers' Association* which calculates the LIBOR rate). Yet, central banks are stepping up initiatives to grant commercial banks greater access to liquidity.

Maybe we should not look for coherence between different types of message. Even if they do influence each other.

The first message comes from the economic environment. Indeed, the property and financial industries are experiencing a crisis, but corporates seem to be doing rather well, keeping the employment market and household income from stumbling too much. In addition, exports remain upbeat and no strong adjustment of inventories is forecast. Overall, the US economy is faltering, but not collapsing.

Then there is the message from CDS. Clearly, the rescue of Bear Stearns has confirmed the view that the systemic risk triggered by the bankruptcy of a large bank was unlikely to spiral out of control. This is the reason behind the downturn in the CDX and ITRAXX indices and also of the banking sub-index. However, more recently, risk aversion has been lower, which has also been a strong factor behind the indices falling. So indices are reacting to fairly "macro" events, be it a sharp drop in systemic risk or market perception that trends in the general environment allow for greater risk taking.

Finally, there is the fact that market liquidity, i.e. the ability to sell financial assets without the price being significantly affected, is still fairly thin on the ground (see graph). This is illustrated by high spreads between interbank rates and 3 month swaps. This probably reflects uncertainties over the financial health and the business model of investment banks.

If the economic environment and risk aversion explain CDS easing, uncertainties over financial health lead us to believe that the drop in CDS prices has been too sharp.

NB: this Agence France Trésor forum offers economists an opportunity to express their personal opinion. Thus, the above article strictly reflects the author's view, and should not be construed as expressing the viewpoints of Agence France Trésor or the Ministry of the Economy, Industry and Employment.
