NEWS

Ensuring continued liquidity for all government securities

In keeping with its strategy of transparency, Agence France Trésor published at the end of 2007 the details of the 2008 indicative State financing programme. The public borrowing requirement, net of buybacks, shall be covered by up to €116.5 billions in medium-term and long-term borrowing. This amount is larger than the €97.5 billion borrowed in 2007, but the increase stems primarily from increased redemption of OAT and BTAN issues. The fiscal deficit is actually down slightly at €41.7 billion.

Outstanding short-term borrowing will increase by €22.1 billion, bringing the amount back into line with historical averages this compartment and meeting strong investor demand for top-rated short-term securities. The same determination to ensure investors continued liquidity across all maturities has led AFT to opt for issuance of equal parts of BTANs and fixed-rate OATs. Inflation-linked issues will account for at least 10% of the medium-term and long-term financing programme. AFT could increase this minimum proportion significantly if investor demand warrants such a move. Inflation-linked issues accounted for 18.5% of net medium-term and long-term issuance in 2007. In 2008, AFT will consider the opportunities for issuing new bonds in this market segment, including a possible new benchmark bond with a maturity of 15 years or more linked to the French inflation rate (OATi).

In addition to inflation-linked issues, a BTAN maturing in September 2010 will be created, along with two new 5-year benchmark securities and two new 10-year benchmark securities. Once again, AFT is committed to tapping the new issues to assure the market of their liquidity. AFT may also tap other issues that are not benchmark securities, depending on investor demand.

Sovereign Wealth Funds – A Game Changer for Financial Markets

By Stephen L. Jen, Global Head of Currency Research, Morgan Stanley

With more than US\$2.8 trillion under management, Sovereign Wealth Funds (SWFs) are already larger than hedge funds, which have US\$1.7 trillion under management. They will likely surpass the world's total holdings of official foreign reserves within the next five years, and grow to around US\$12 trillion by 2015. SWFs are a game changer, for the financial markets and for financial policies. They will be sources of 'high octane' cross-border flows that are very large in size and relatively proactive in nature. Collectively, they are likely to propel three key trends in financial markets.

1. SWFs favour equities over bonds.

Our calculations show that, all else equal, the mere formation of the SWFs should lead to a 40 basis points rise in long-term

► The 20 main Sovereign Wealth Funds

Country	Fund Name	Assets (billion US\$)	Inception year	Source of funds
UAE	ADIA 1/	875,0	1976	Oil
Norway	Government Pension Fund - Global	345,0	1996	Oil
Singapore	GIC 1/	330,0	1981	Other
Saudi Arabia	Saudi Arabian funds of various types 1/	300,0	N/A	Oil
Kuwait	Reserve Fund for Future Generation	250,0	1953	Oil
China	CIC	200,0	2007	Other
Singapore	Temasek Holdings 1/	159,2	1974	Other
Libya	Oil Reserve Fund	50,0	2005	Oil

1/ The author's guess estimates as of January 2008

Source : Morgan Stanley

sovereign bond yield and a 10% rise in the P/E ratio of global equities. These are very conservative estimates of the likely impact on bonds and equities. As an example, the six members of the GCC (Gulf Cooperation Council) have close to 500 billion barrels of proven oil reserves. At today's market prices, this is worth some US\$44 trillion. Since 1985, in SDR terms, the composite value of equities has risen seven-fold, while bonds have risen only around four-fold. Crude oil has actually performed very poorly – doubling in value during the past two decades. Thus, from a financial perspective, it makes much more sense for the GCC countries to convert their under-ground wealth into above-ground wealth. The market capitalization of the world's equity markets is around US\$52 trillion. This gives some perspective on the likely impact of the GCC's oil reserves on global risky asset prices.

2. Full deployment of SWFs could hurt both the USD and the EUR, and help EM currencies. These new reservoirs of capital will likely be diverted away from developed markets into developing markets, with clear implications for currencies. We are, therefore, likely to see a great deal of EM-to-EM investment flows through SWFs. We believe both the USD and the EUR will be sold by SWFs, and that many of the EM currencies, the JPY and the GBP will be bought. Our calculations show that, compared to the current currency composition of official reserves of 60.5% in USDs, 28.6% in EURs, 5.9% in GBP, 2.6% in JPY, and 2.4% in everything else, SWFs are likely to have a very different currency composition: 43.0% in USD, 18.3% in EUR, 8.5% in GBP, 12.8% in JPY, and 17.4% in other (mostly EM) currencies.

3. SWFs will likely play a dominant role in alternative investments, which include infrastructure, private equity, real estate, real estate debt, commodities, and hedge funds. Our guess is that many SWFs could have a long-term model portfolio with 25% in bonds, 45% in equities, and 30% in alternative investments. Given the relatively low liquidity in alternative investments, activities of SWFs in this space may be headline grabbing and may meaningfully affect market prices.

NB: this Agence France Trésor forum offers economists an opportunity to express their personal opinion. Thus, the above article strictly reflects the author's view, and should not be construed as expressing the viewpoints of Agence France Trésor or the Ministry of the Economy, Finance and Employment.
